About us

Diamond Tooling Systems - DTS GmbH

Welcome to Diamond Tooling Systems - DTS GmbH!

Based in Kaiserslautern - Germany - we have specialized in the development, production and distribution of precision tools equipped with ultrahard cutting materials, such as PCD (polycrystalline Diamond), CVD-D (CVD thick-film Diamond), UltraDiamond (monocrystalline binderless Diamond) and CBN (cubic boron nitride). As a leading manufacturer for tools with laser cutting edges, we offer machining solutions in the areas of turning, milling, grooving, drilling, reaming, threading, and tool holding.

To be able to economically process ultra-hard cutting materials such as PCD, CVD-D and CBN on precision tools were realized early on that we would have to move away from the traditional production technology of „grinding“ to new technologies such as the „laser removal process“. This decision has contributed to the fact that our customers regard us, DTS GmbH, as the pioneer and leading manufacturer of laser tools for machining.

Ultra-hard high-performance cutting materials have a key function in Metal-cutting manufacturing. Precision tools equipped with ultra-hard cutting materials are products that require a great deal of explanation. The economical use of the cutting materials is only ensured if the machining process and the cutting material are coordinated with each other.

This is exactly where we at DTS - Diamond Tooling Systems GmbH - step in: Tools and processes are subjected to a comprehensive analysis by our experienced application engineers. Subsequently, the new process optimization is presented to the customer and in the next step, it is implemented in their production. Only in that way is it possible to exploit the optimum potential of our high-tech cutting materials.

Our experienced application engineers are also available to advise you during ongoing production. This close cooperation and mutual trust is the basis of our success.

With more than 25 years of optimization experience in the processing industry, this is where we see our strength!

PASSION FOR DIAMOND...

ultrahard cutting materials at a glance

... is not just a slogan for us - we live this passion in our daily dealings with our customers and we are your partner when it comes to Diamond or CBN tools.

Polycrystalline Diamond (PCD)

The well-known standard Diamond

PCD is a synthetically produced, extremely tough, intergrown mass of Diamond particles with random orientation in a Metal matrix. It is produced by sintering selected Diamond particles at high pressure and high temperatures. Graphite is used as a catalyst so that the PCD crystals grow together. PCD has high thermal conductivity and good heat dissipation from the cutting area. In addition, PCD has the highest bending strength of all cutting materials bending strength of all cutting materials.

PCD is very well suited for machining aluminium with a Si content of up to 10% and/or other abrasive fillers. The hot hardness is approx. 750°C, the areas of application are similar to those of CVD thick film Diamond, but the high efficiency of CVD thick film Diamond comes into its own with hard-brittle materials or aluminium with a Si content of 10% or more.

CVD thick film Diamond (CVD-D)

The star among Diamond Cutting Materials

For machining hard-brittle materials such as ceramics, glass, glass-ceramics, hard Metal, MMC and fibre composites such as CFK and GFK. Due to the lack of a bonding matrix, the Diamond content is much higher than with PCD. In the group of ultra-hard cutting materials, the binderless CVD-D is one of the hardest, artificially produced Diamond cutting materials.

CVD-D is characterised by high hardness and high wear resistance. These properties make CVD-D the perfect cutting material for machining abrasive materials. Compared to PCD, which is damaged by the abrasive particles due to its soft metallic binder phase, the CVD-D cutting edge remains stable due to its binderless anchoring in the Diamond matrix.

If CVD-D is used correctly, the service life can be increased by up to 10 times (and even more) compared to PCD!

Binderless Diamond (UltraDiamond)

The hardest single Crystal

Single-crystal elements are laser-cut from Diamond blanks in a defined orientation using laser segmentation technology. This new technology makes it possible, in addition to polycrystalline cutting materials such as PCD and CVD-D, to also braze a monocrystal (UltraDiamond) under high vacuum on any tool carrier. Compared to PCD, the tool life can be increased by approx. 15 to 25 times and compared to CVD-D by approx. 2 to 5 times.

The areas of application are similar to PCD and CVD-D, but this monocrystalline cutting material offers a further significant increase in tool life in all applications where PCD and CVD-D reach the limits of economic viability. The UltraDiamond cutting material makes economical machining of very hard, highly brittle materials such as Ceramics, glass, glass-Ceramics and hard metals with low cobalt binder and nickel binder (<10%) possible. Ceramics, glass, glass-ceramics and hard metals with low cobalt binder and nickel binder (<10%).

Polycrystalline Cubic Boron Nitride (CBN)

Chemically resistant and stable at high temperatures

CBN is stable up to 1,400°C. Boron nitride powder is the starting point for the production of CBN, which has been available since the late 1960s. It is produced under high pressure as well as at temperatures of over 1,500°C and is specially adapted to the final application through many different substrates.

Today, CBN is considered the second hardest material after Diamond cutting materials!

The applications of CBN are in the automotive industry, aerospace, tool and mould making and mechanical engineering. The wide spectrum as a cutting and abrasive material includes hardened Steels, Cast Iron, chilled Cast Iron, sintered materials, stellite, nickel and cobalt-based superalloys. In many applications, cubic boron nitride is preferred over Diamond cutting materials because it is absolutely stable in air at temperatures up to 1,400°C. Diamond, on the other hand, starts to decompose at a temperature of about 750°C.

Compared to PCD, CBN is also characterised by its chemical resistance to ferrous materials.

Our cutting materials

and their main areas of application at a glance

CBN is now considered the second hardest material after Diamond cutting materials!

CBN-H	H25	• designed for the smooth cut
	H35 45 65	• are the all-rounders for the smooth to heavily interrupted cut - 1. Choice ist CBN H65
	H85	• was specially developed for the highly interrupted cut
CBN-P	P25	• for smooth and slightly interrupted cut
	P45	• for light to heavy interrupted cut
CBN-K	K65	• our all-rounder for the smooth to heavily interrupted cut
	K85	• for light to heavy interrupted cut
CBN-S	S85	• our all-rounder for smooth to heavily interrupted cuts
CBN-X	X90	• for smooth and slightly interrupted cut
	X95	• for light to heavy interrupted cut

Your Notes

The diagram illustrates a 2-edge tipped SKL 3.00 mm carbide tip. It features a central circular hole with a radius labeled 'R'. The outer edge is a square profile with a thickness labeled 'S'. A dimension line labeled 'IC' indicates the distance from the center of the hole to the inner corner of the square profile.

DTS-Specials

Plan/Axial Machining:

Our VXGW cutting insert is designed for face and axial machining of contours from a minimum outside diameter of 10mm, using the maximum groove depth of 1.5mm.

Standardly equipped with CBN-K65, H25, and X90, but of course also available with all other CBN types upon request.

Application range:

- CBN-P Sintered Steel ...
- CBN-K Grey Cast Iron (GCI), Ductile Cast Iron (DCI) ...
- CBN-S Ni-, Co-, Fe- and Cr-Alloys, Titanium, Titanium Alloys ...
- CBN-H Steel hardened up to 72 HRC, Cast Iron hardened ...
- CBN-X Tool Steel hardened, Stellite, Stainless Steel hardened, powder metallurgical Steel ...

You will find further application ranges in the detailed overview on page 8.

Cooling recommended

In machining with CBN inserts, proper cooling is a key to successful machining.
Here you will find our recommendation:

	Trocken	Luft	Emulsion	Öl
P		4. Choice	3. Choice	1. Choice
		2. Choice	1. Choice	
		2. Choice	1. Choice	
K		4. Choice	3. Choice	1. Choice
		2. Choice	1. Choice	
		2. Choice	1. Choice	
S			3. Choice	1. Choice
			2. Choice	1. Choice
		2. Choice	1. Choice	3. Choice

Cutting data for hard turning can be found on page 58.

Never use max. ap with max. feed rate

Significantly higher cutting depths and feeds can be realised with RNGN and SNGN Solid inserts.

If you have any further technical questions, please do not hesitate to contact us by phone or e-mail!

Formulas

Turning

v_c	Feed rate	mm/min
f_n	Feed per revolution	mm/rev
n	Spindle speed	rev/min
v_c	Cutting speed	m/min
D_c	Cutter diameter	mm
t_c	Cutting Time	min
l_m	Cutting length	mm
Q	Stock removal rate	cm³/min
a_p	Cutting depth	mm

► Cutting speed

$$v_c = \frac{D_c \times \pi \times n}{1000} \quad [\text{m/min}]$$

► Spindle speed

$$n = \frac{v_c \times 1000}{\pi \times D_c} \quad [\text{U/min}]$$

► Feed per revolution

$$f_n = \frac{v_f}{n} \quad [\text{mm/U}]$$

► Cutting time

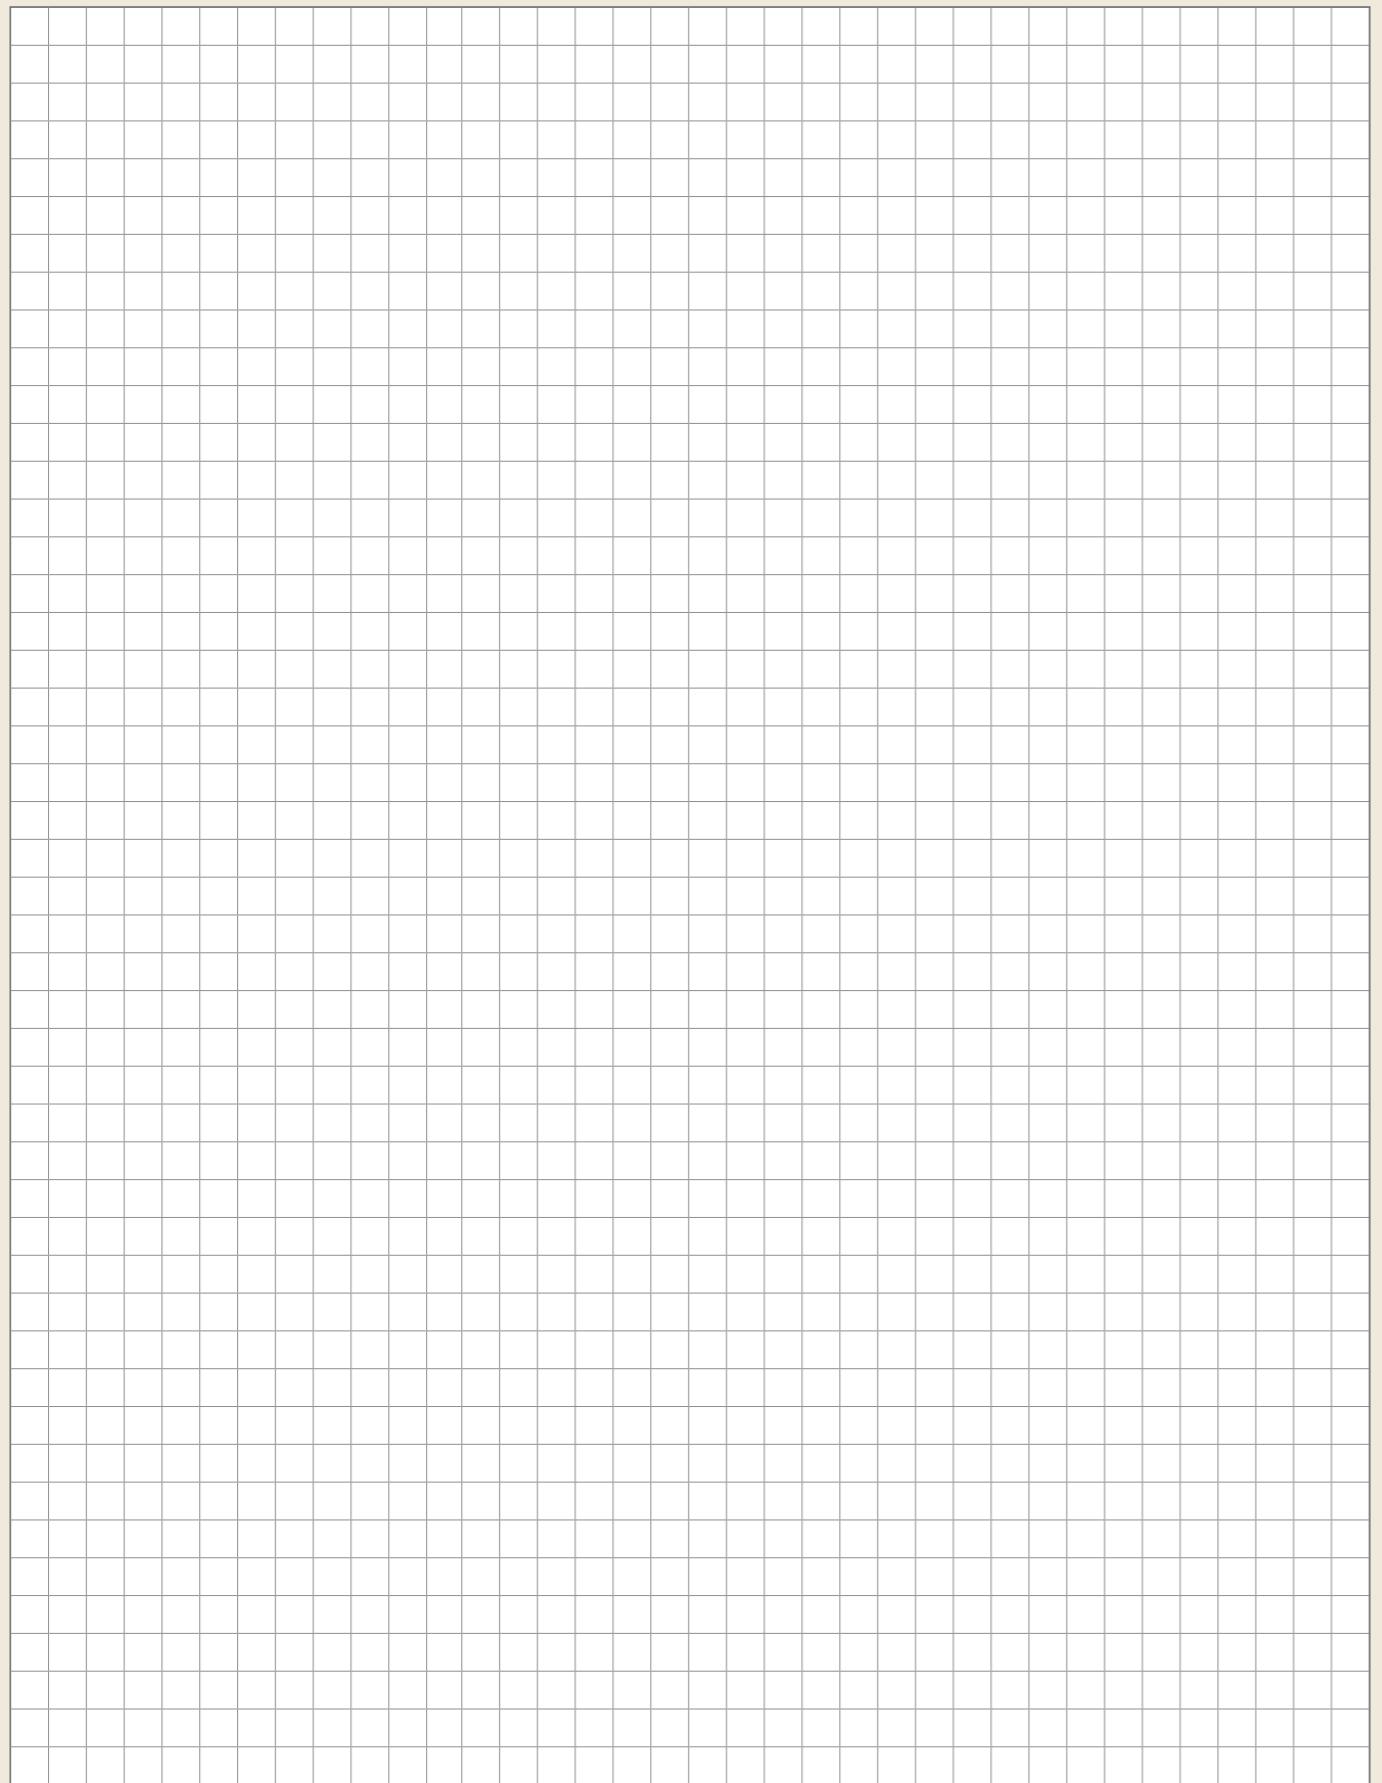

$$t_c = \frac{l_m}{f_n \times n} \quad [\text{min}]$$

► Stock removal rate

$$Q = v_c \times a_p \times f_n \quad [\text{cm}^3/\text{min}]$$

Your Notes

We reserve the right to make production-related technical changes and changes to the delivery program. The cutting values given are guide values which must be adjusted according to the process environment.

Safety Instructions:

- ▶ DTS tools equipped with ultra-hard cutting edges are very sharp laser cut tools.
- ▶ Careful handling of the tools during unpacking and their use is recommended.
- ▶ Wearing protective gloves reduces the risk of injury.
- ▶ Material chipping and tool breakage may occur during machining, wearing safety glasses is recommended.
- ▶ Balanced holders are recommended for speeds above 10,000 rpm.
- ▶ We do not accept any responsibility for tools that have been modified, reground or used incorrectly and beyond their normal service life.
- ▶ Protective goggles are recommended when using DTS tools, sparks may also occur, make sure that no fire can occur.
